PROFESSIONAL PROFILE

Results-driven Software Quality Assurance Engineer with deep expertise in manual testing methodologies, defect lifecycle management, and the Software Development Lifecycle (SDLC). Proven track record of optimizing enterprise iERP web applications by architecting robust manual test cases, surfacing critical edge-case bugs, and collaborating seamlessly with cross-functional development pods. Highly skilled in executing backend SQL database validations and leveraging test coverage metrics to accelerate product release cycles while guaranteeing zero-defect production deployments.

CORE TECHNICAL SKILLS

QA & Testing Frameworks: Manual Testing, End-to-End Functional Testing, Full Regression Suites, Black-Box Testing, Test Case Lifecycle Design, Defect Classification, Requirements Traceability Matrix (RTM), SDLC, STLC

Languages & Databases: JavaScript (ES6), HTML5, CSS3, MySQL Database, T-SQL Query Construction, Backend Data Validation

Tools & Platforms: Redmine Defect Tracker, Git/GitHub Version Control, Postman (REST API Client), Katalon Studio, VS Code, BrowserStack Cross-Browser Testing

Cross-Functional: Client Relationship Management, High-Tier Technical Support, Analytical Problem Solving, System Performance Auditing, Root-Cause Isolation

PROFESSIONAL EXPERIENCE

Junior Software Engineer (QA)

FEB 2025 - PRESENT

Time-lapse Informatics and Solutions

- Design, architect, and execute comprehensive manual test cases for end-to-end functional, regression, and usability testing on enterprise iERP web applications, securing 95%+ requirement coverage across major modules.
- Identify, isolate, and document complex software flaws using Redmine; partner directly with core developers and product managers to conduct root-cause analysis, enforcing a 98% timely remediation rate for critical defects.
- Validate backend application logic and maintain rigorous data integrity by composing and executing targeted SQL verification queries, successfully decreasing data-related software anomalies in production by 30%.
- Provide high-tier technical support to external enterprise clients, proactively diagnosing production infrastructure incidents, reproducing system bugs, and validating hot-fixes to uphold a 99% application uptime standard.
- Spearhead cross-functional alignments between engineering teams and end-users to facilitate seamless UAT feature testing, driving an aggregate 15% reduction in deployment cycle delays.
- Execute continuous real-time system monitoring of web modules to proactively unearth system latencies, successfully intercepting and mitigating up to 20% of potential production server downtimes.
- Formulate and manage dynamic Requirements Traceability Matrices (RTM) to map technical software deliverables directly against core product guidelines, achieving absolute 100% test scenario mapping.

EDUCATION

Bachelor of Engineering (B.E.) - Computer Science and Engineering

2022

JCT COLLEGE OF ENGINEERING AND TECHNOLOGY
